

Angelus Sideralis:

OR, AN

E P H E M E R I S

OF THE

Celestial Motions,

WITH AN

ALMANACK

For the Year of our
LORD GOD, 1733.

being the first after Bissextile or Leap-Year,
and from the Creation of the World 5682 Years;

Wherein you may find

The daily Motions and mutual Configurations and Aspects of
the Planets; the Sun's Entrance into the four Cardinal Signs, with
Astronomical Conjectures therefrom, and upon each Month of the Year;
the Eclipses of the Luminaries; the Rising and Setting of the Sun;
the New and Full Moons, together with her Rising, Southing and
Setting; Length of the Days; Break of Day, and ending of Twilight;
the Increase and Decrease of the Days; with several useful Tables
and entertaining Particulars meet for such a Work.

to the Meridian of *London*, but to the Latitude of 54 d. North;
being nearly the Latitude of *Lancaster*.

By JOHN HARTLEY Philoso

meum, nil meum: Nihil dictum, quod non sit verius.

L O N D O N:

Printed by J. DARBY and T. BROWNE for the Company
of Stationers. 1733.

P R Æ F A T I O.

Curious Readers.

THIS grown so much into a Custom to prefix a Preface to every trivial Performance, that I must either con-
therewith, or be tax'd with Singularity: Therefore
reserv'd this Page on purpose to secure me from that Impurita-
Some Persons are wont to pretend many Things to excuse
Meanness of their Performances, which they neither believe
selves, nor would have others to believe: I'll give you two
sons upon which I really believe mine to be so. First, It is
the Fruit of a continued Study, but the Produce of leisure
no wonder therefore if it want much of the Symmetry and
portion which otherwise it might have had: And my other
is, because this is the first time I ever travell'd this Road: It
probable therefore I should be so dextrous at every Turn
those who have for many Years successively travell'd the
Road. Upon these Accounts I request the Candour of the judi-
Readers.

What I have done, I hope, is plain to a mean Capacity
suffer me to apologize for what I have omitted, viz. the
Aspects, a Table of Houses, the Planets Latitudes, and the
tion of natural Days; these I think are the Principal. As
Table of Houses, and the Equation of Days, they being
Year the same, an Ephemeris of any Date, which inclu-
contains them will well serve: the Lunar Aspects being
useful to Artists; any ingenious Person, when occasion requi-
will easily deduce them from the Planets Motions, and as
as they are usually inserted: the Planets Latitudes are chie-
cessary in the Genethliacal part of Astrology, and such curi-
tists will either themselves calculate them, or have recourse
Ephemerides as are calculated to Degrees and Minutes,
usually contain them. I hope, in general, it may be use-
the honest Country Man; and if I happen to come this way
I hope to render it more acceptable to the sober Artist;
which I shall always remain,

A real Friend,

John Hart

Reader,

BEFORE thou read'st the following Book,
Upon this Page bestow a serious Look,
Old *Saturn* is extremely cold and dry,
Jove gently heats, and moistens all the Sky.
Bold *Mars* is hot and dry; intemperate.
Sol is the Fountain, both of Light and Heat,
Yet are his Beams in Dryness moderate.
Fair *Venus* cold and moist is said to be,
Convertible is nimble *Mercury*,
Yet cold and dry, if in no Aspect's he.
The Moon is cold and moist, yet Authors say
Her Nature changes as her Age alway.
The furious Ram doth rule the Head and Face,
The Neck and Throat are earthy *Taurus*' place,
The Arms and Shoulders to the Twins pertain,
The Crab doth Breast and Stomach entertain.
The Heart and Back's the generous *Lion's* Share,
Th' Bowels and Belly are fair *Virgo's* Care,
The Balances the Reins and Loins do try,
The Secrets to the *Scorpion* they apply.
The Thighs and Hips unto the Centaur strong,
The Knees and Hams unto the Goat belong.
The Waterman; the Legs do entertain,
Pisces, the Feet; which meet the Ram again.
The Ram, the Lion, and the Archer bold,
The fiery Trigon evermore do hold.
The Bull, the Goat, also the modest Maid,
Are of the earthy Trigon, it is said.
The Twins, the Balances, and Aquarie,
Are airy Signs, always esteem'd to be.
The Crab, the *Scorpion*, and the Fishes mute,
The watry Trigon still do constitute.
♄ Conjunction, improperly called an Aspect.
* Sextile 60 deg. distance. □ Quartile 90 deg.
△ Trine 120 deg. ♂ Opposition 180 deg.
distance.

Now if my Book the Regal Table lack,
'Twill scarce be counted for an Almanack.

In Novo Calendario quia undecim dies ex Anno nunc ablati sunt, & futuris seculis plures omittentur, varia est & mutabilis Epactarum Ratio. Alsted.

to find the true Hour of the Night by the Shadow of the Moon upon a Sun-Dial.

FIRST, By the Calendar following observe the Hour and Minute of the Moon's coming to the South that day, on which you propose to find the Hour of the Night; next observe the Shadow of the Moon upon the Dial, and if the Shadow be past the Hour Line, add the Hours and Minutes of the Shadow to the Hours and Minutes of the Southing of the Moon, and the Sum is the Hour of the Night; but if the Shadow fall short of the 12 hour Line, subtract the Hours and Minutes which the Shadow is short of from the Southing of the Moon, and the Remainder is the Hour of the Night. But if you would be very exact, for every half Hour that the Shadow is past the 12 Hour Line, you must subtract one Minute from the time before found; and for every half Hour that the Shadow wants of the said Line of 12, you must add one Minute to the time before found, so will you have the exact time of the Night, if your Dial be carefully adjusted.

B. The refulgent Planet VENUS is our bright Morning Star until the 4th day of June; when, having past her Conjunction with the Sun, she becomes Occidental, and our Evening Star to the end of the Year.

In the foregoing Page, for want of room, were omitted, the Dragon's head, the Moon's North Node; ☊ Dragon's Tail, the Moon's South Node; ☷ Tellus, the Earth; and ☿ *Pars Fortuna*, or, the part of Fortune.

January hath XXXI Days.

A homely Banquet, Reader, I prepare,
To entertain thee, this commencing Year,
Yet if thy Stomach's good, I make no doubt
Something to please thy Palate, thou'lt find out,
I bid thee welcome, scruple not to taste
The Meat is wholesome, tho' 'twas dress'd in haste.

February hath XXVIII Days.

Phœbus to th' *Aequinoctial* seems to haste,
Our tedious Nights the length'ning Days do waste;
But *Mars* with *Saturn* in the Ram conjoin'd,
No good Effects, I fear, we thence shall find,
Yet hope no greater Mischiet to our Isle,
Than sly Debates, th' unwary to beguile.

Thrice happy he, who leads a cheerful Life,
With hopeful Children, and a loving Wife,
With constant Labour tills his Country Farm,
Useful to all Men, doth to no Man harm.
The wise Man says, this Man's Repose is sweet,
Rich Men's Abundance will not let them eat.

March 1773.

[D] 8 1

Only by Pride Contention comes; said he
Who was esteem'd the wisest Man to be;
The meek and humble Spirit is belov'd,
But Arrogance deserves to be reprov'd;
Some of their Parts acquired are too proud,
But more that want them, praise themselves aloud.

R. A.	riser.	South	Dec.	S.	
M.	M.	M.			
12	4 50	8 49	3	10	New Moon 5 day 37 ^h past midnight.
13	5 21	9 46	2	46	First quarter 11 day 52 ^h past 4 at night.
14	5 48	10 41	2	22	Full Moon 19 day 31 ^h past 10 before n.
15	6 7	11 32	1	59	Last quarter 27 day 21 ^h past 1 aftern.
16	sets.	0 A 26	1	35	The 3 day near 7 in morn. ♀ with ☾
17	8 A 10	1 21	1	11	The 4 day about 9 in morn. ♀ with ☾
18	9 36	2 14	0	48	The 6 day about 11 in morn. ♀ with ☾
19	11 2	3 11	0	24	The 7 day near 4 aftern. ♂ with the ☾
20	12 22	4 8	0	0	The 21 day near 7 at nig. ♀ with the ☾
21	0 M 22	5 6	0	N 23	☾ sets 22 ^h past 7 at night
22	1 32	6 4	0	47	☾ rises 13 past 9 at night
23	2 30	7 0	1	11	☾ sets 34 after 9 at night
24	3 14	7 54	1	34	☾ rises 11 p. 5 in morn.
25	3 49	8 46	1	58	☾ is very near the Sun.
26	4 15	9 33	2	22	In this Month ♂ and ♀ oppose ☾
27	4 36	10 16	2	45	from ☾ the Ascendant of Ireland; such
28	4 54	11 0	3	8	Configurations are wont to render the
29	5 11	11 41	3	31	Clergy uneasy: perhaps it may affect
30	sets.	Morn.	3	55	his Holiness the Pope. ♀ is in ☾ ☾
31	8 A 4	0 24	4	18	and ☾, and ☾ and ☾ in ☾ in ☾
A	9 13	1 64	4	41	the Affairs of some European Princes
1	10 21	1 49	5	4	seem to be manag'd with much Secrecy
2	11 29	2 34	5	27	and Artifice, but something remarkable
3	12 33	3 22	5	50	is upon the Anvil, and a little time
4	0 M 33	4 12	6	13	will manifest the same.
5	1 30	5 36	6	36	Upon Easter-day, by the E. of Orrery.
6	2 19	5 56	6	58	Hail, glorious Day! on which sh' Almighty
7	2 57	6 48	7	21	gave [Grave.
8	3 28	7 40	7	44	To this new World, the first-fruits of the
9	3 53	8 32	8	5	Hail glorious Day! in thy illustrious Light,
10	4 14	9 23	8	27	What Faith could scarce believe, appear'd to
11					fight. [thep
					Hail, thou most glorious Day! for 'twas on
					Death lost his Sting, the Grave his Victory!

April hath XXX Days.

|D|O|R|O|S

This charming Month, the Harbinger of Light,
Rides in fair *Phosphor's* Chariot with delight,
Whom *Jove* in *Scorpio* doth oppose with Snares;
Motion begets Effects which Time declares:
Perhaps some *Grandees* will not now agree;
Or some *Gamaliel* chaffis'd must be.

April 1733

[D] 87

Time drives his Chariot at an equal Rate,
None surely knows when Life will terminate,
If this days Work we shall procrastinate,
Perhaps to morrow it may be too late
To do the same: the wise Man says that we
Whate'er we do, should do it instantly.

May 1733

10192

The choicest Gifts of Providence Divine,
Increase of Goods, and Grain, of Bread and Wine,
Yield no Contentment to a Miser's Breast
Whose Avarice deprives his Mind of Rest,
'Twas not in vain that great St. Paul did cry,
Covetousness is gross Idolatry.

14	9 A 12	0 A 48	18 43	Full Moon 17 day 1 past 7 at night.
15	10 15	1 48	18 58	Last quarter 25 day 31 past 10 morn.
16	11 14	2 50	19 12	Observe that in the Lat. of 54° North,
17	12 0	3 50	19 25	there is no real Night, but Twilight
18	0 M 0	4 45	19 38	from the 1st of May to the 21st day of
19	0 33	5 36	19 51	July; and in the Latitude of London
20	0 58	6 22	20 3	the Night is wholly Twilight from the
21	1 18	7 6	20 16	21st day of May to the 10th day of
22	1 34	7 50	20 28	July.
23	1 51	8 31	20 39	The 1 day at midnight ♀ is with the ☾
24	2 6	9 12	20 51	The 2 day at 11 before noon ♀ with ☾
25	2 21	9 53	21 2	The 4 day about 5 in morn. ♂ with ☾
26	2 37	10 37	21 12	The 14 day near 7 at night ♀ with ☾
27	2 57	11 23	21 23	The 28 day near 9 in morn. ♀ with ☾
28	☾ rises.	morn.	21 33	The 30 day near 9 in morn. ♀ with ☾
29	9 A 25	0 9	21 42	♂ rises 31' past 2 morn.
30	10 18	1 0	21 51	♀ sets 41' aft. 2 in morn.
31	11 1	1 51	22 0	The 16 day } ♂ sets 26' past 9 at night.
J	11 34	2 42	22 8	♀ rises 45' past 3 morn.
2	12 4	3 31	22 16	♀ rises 10' past 3 morn.
3	0 M 4	4 23	22 24	Fiery Mars has had a very quiet Pas-
4	0 26	5 12	22 31	sage thro' the Ascendant of London,
5	0 47	6 1	22 35	so much the better for that honourable
6	1 6	6 51	22 44	City; now he meets the Sextile of
7	1 24	7 39	22 50	Saturn and Trine of Jupiter as his
8	1 45	8 33	22 56	farewel to that Sign; yet I judge this
9	2 7	9 26	23 0	to be a time of considerable Action.
10	2 36	10 25	23 4	We have two remarkable Eclipses this
11	3 14	11 25	23 8	Month.

Of have I read, of Musick of the Spheres, you 1 13 38
 But no such Raptures ever reach'd my Ears. 6 3 38
 Last Month the heav'nly Wanderers were mute, 11 3 38
 Did neither join in Friendship, nor dispute 16 3 38
 In Variance; but this Month behold a Chain 21 3 38
 Of healing Rays do beautify the Scene. 26 3 40

As now the Hosts Celestial do, would we
bury our Discords, live in Unity;
Then might we hope the Heav'ns would yield Increase
and God would crown our Isle with Truth and Peace,
But if each other we devour and bite
The Prince of Peace will not in us delight.

July hath XXXI Days.

But see, alas, how soon the Scene is chang'd,
This Month the wandering Planets seem estrang'd;
Heav'n's bright Militia now themselves engage,
To pour Confusion on this Iron Age;

Yet do they not contend with Sword or Spear,
Nor feel those Passions which to us adhere.

So many Quartiles in one Month to find,
 Such Crowds of Rays of a malignant Kind,
 Give us just Cause to fear their Influence
 Amongst Mankind strong Discords will dispense;
 Divert the Omen, God of Stars, I pray
 That we, in Peace, may praise thy Name alway.

R. A.	Sett. A	South. A	Dec. N	
128	48	1	3	22 1 First Quarter 7 day 35' past 9 at night.
139	14	1	56	21 53 Full Moon 15 day 8' past 9 afternoon.
149	36	2	46	21 44 Last Quarter 22 day 50' past 9 at night.
159	54	3	32	21 36 New Moon 29 day 6' past 7 afternoon.
1610	8	4	14	21 25 The 8 day near 6 in morn. ♀ with ☾
1710	24	4	56	21 15 The 22 day near 5 in morn. ♀ with ☾
1810	40	5	38	21 5 The 29 day near 5 in morn. ♂ with ☾
1910	58	6	21	20 54 The 31 day about 2 in morn. ♀ with ☾
2011	19	7	5	20 43 The 31 day near 10 at night ♀ with ☾.
2111	45	7	50	20 31 ♀ rises 26' p. 10 night.
2212	17	3	37	20 19 ♀ sets 28 p. 10 night.
230	M17	9	28	0 7 The 16 day. ♂ combust, very n. Sun
241	1	10	20	19 55 ♀ sets 13 p. 8 at night.
251	55	11	14	19 42 ♀ sets 28 p. 8 at night.
261	rises.	morn.	19	29 A State of uninterrupted Felicity is not
278	A29	0	6	19 15 to be expected in this Vale of Tears,
283	52	0	58	19 1 but such a State will be the sure Reward
299	9	1	47	18 47 of Piety and Virtue in the Future
309	29	2	33	18 34 World. The Configurations of the
319	48	3	24	18 19 Erratics this Month are many and ma-
3210	6	4	14	18 4 levoleat; Italy in general and Rome in
3310	30	5	4	17 48 particular, seems to be especially con-
3411	37	6	50	17 17 cern'd: Very warm Debates there. I
3512	26	7	52	17 17 should be glad if his Holiness be con-
360	M26	8	52	16 44 Vinc'd, that (what Epichets soever his
371	27	9	52	16 27 Votaries have conferr'd on him, or he
382	3	10	49	16 9 has arrogated to himself) he is no:
393	fees.	11	44	15 53 really endued with the Prerogative of
407	A400	A	36	15 34 Infallibility.
417	53	1	23	15 16

August hath XXXI Days.

|D.|©R.|©S

Now Sol's in Trine to Saturn; and those Stars
Which hidden Treasons move, and open Wars,
Salute each other by a friendly Trine;
To hurt the just, the wicked oft combine.

I wish there were no Reason to expect

The last Month's angry Rays will this affect.

12 8	A 16	A 9	15 No	First quarter 6 day 3h 18' afternoon.
13 3	3 2	5 2	14 41	Full Moon 14 day 43' past 7 morning.
14 8	4 6	3 4	14 22	Last quarter 21 day 14' past 3 morning.
15 9	4 4	1 6	14 5	New Moon 28 day 35' past 7 morning.
16 9	2 5	1 13	4 6	The 4 day near 7 at night ♀ with ☾
17 9	4 9	4 7	13 27	The 18 day near 10 morn. ♀ with ☾
18 10	1 9	3 3	13 7	The 27 day near 3 morn. ♂ with ☾
19 10	5 6	2 1	12 48	The 29 day near 4 morn. ♀ with ☾
20 11	4 7	1 3	12 29	The 30 day about 8 morn. ♀ with ☾
21 12	4 8	5 12	8	♂ rises 28' p. 8 at night.
22 0	M 48	5 9	11 48	♀ sets 37' p. 8 at night.
23 1	5 9	5 3	11 28	The 16 day } ♂ rises 5 p. 4 in morn.
24 3	1 9	4 4	11 7	♀ sets 25 p. 7 at night.
25 1	♂ rises.	morn.	10 46	♀ sets 33 p. 7 at night.
26 7	A 40	3 5	10 25	The Radiations of the Celestial Wan-
27 7	5 8	2 5	10	derers this Month, are not many, but
28 8	1 9	1 3	9 42	of a Pacific Nature. The Trine of ☉
29 8	4 2	6 9	20	to ♀ and ☉'s * to Jupiter, seem to
30 9	9 4	0 8	5	dispense Honour and Preferment upon
31 9	4 3	5 5	8 38	some grave Aged Patriot; yet ♀ being
32 10	2 8	5 2	8 17	Retrograde, and stepping back into his
33 11	2 4	5 2	7 55	Fall, will either cause some Delay, or
34 12	3 3	5 1	7 33	make the Honour less than was expect-
35 0	M 33	5 0	7 12	ed. Mars now takes his Leave of Leo
36 1	4 4	4 2	6 49	with a Trine to Saturn; yet I'm apt to
37 3	3 10	3 5	6 27	conclude that by this time the Seven
38 4	1 9	2 3	6 5	hill'd City hath in several Respects been
39 8	♂ sets.	A 9	5 42	sensible of his Influence.
40 6	A 44	5 3	5 18	
41 7	0 1	3 6	4 55	
42 17	1 7	1 9	4 32	

September hath XXX Days.

|D|O|R|O|S

Cyllenius Retrograde with *Sol* doth meet,
 Bold *Mars* doth *Jove* with friendly *Sextile* greet;
 The fullen Star sair *Venus* doth oppose,
 But *Jove's* benigner Rays disperse her Foes.

Thus Heav'n's Clockwork by its various Motions,
 Foretels the World of Peace, and of Commotions.

The 16th Day Nov. *Aphelion* rises 10 past Midnight.

The 2d, 3d, 4th and 5th days of this Month, 1666. was the Honourable City of London burnt.

Annus memorabilis horret.

B 4

Bright *Venus* now smiles on the God of War,
Hermes and *Sol* oppose the slow-pac'd Star:
 In treacherous *Scorpio*, *Stilbon* treats with *Jove*,
 And *Saturn* seems to court the Queen of Love.
 Unsettled Weather, and untoward Actions
 Seem to attend these Stellary Transactions.

The 16th Day Night, Queen's Post, 12 South 57° 21' 2" in the East

Britons be glad, rejoice on the Birth Day
Of Royal GEORGE, who Albion's Realms doth sway;
His Coronation Day commemorate,
Who, under God, supports our Church and State:
Grant him long Life and Peace, Ye Powers Divine,
And may his Glory, like his Virtues shine;
Be this your constant Prayer: it shall be mine.

November 1733.

|D|Q m|

Discord's the Bane of each Community,
 and reigned Friendship is an Enemy,
 which undermines that little City's Wall,
 and makes its Towers and Bulwarks quickly fall:
 In Families it strange Confusion makes,
 And from a Nation their Defense it takes.

9	51	4	31	21 3 If some People in the last Age had
11	5	5	23	21 14 study'd to be quiet, and to do their own
12	25	6	21	21 5 Business, the unparalell'd Treason which
10 M	25	6	59	21 36 by God's special Providence was disco-
3	32	7	38	21 46 ver'd on the 5th day of this Month 1604
5	43	8	20	21 55 had found no Place in our Calendar,
6	50	9	0	22 4 and the same Admonitions, duly ob-
3	59	9	43	22 13 served, would be of singular Emoluments
4	7	10	26	22 21 in the present Age.
2	14	11	12	22 29 The ☽ of ☉ and ♀, tho' in m, will
	sets.	12	0	22 30 yet have some benevolent Influence
0	A 22	0 A	49	22 42 upon some remarkable Persons in sun-
5	16	1	40	22 49 dry Functions. The ☽ of ♀ and ♂,
42	20	2	30	22 56 tho' both are debilitated, will also, in an
21	28	3	18	23 1 obscure Manner, influence the Affairs
47	41	4	7	23 5 of some European Countreys. Time
C				will make it manifest.

December 1733.

|D| Q. m

Shines obliquely on our Northern Climes,
 Our Spring and Summer's gone; our Golden Times
 (still), but constant Steps, have gently past,
 Autumn's vanish'd too: at last
 Involv'd in Winter's Labyrinth we appear,
 Death ends our Life, Winter concludes the Year.

Sic transit Gloria Mundi.

 } ♂ rises 25 p. 3 morning
 } ♀ sets 52 p. 7 at night.
 } ♀ sets 9 p. 4 at night.
 Both in this Month and the last ♂ and
 ♀ are in a Sextile Aspect; many Peo-
 ple strive to be wise as Serpents, but
 care not to be harmless as Doves. Trick-
 ing is become a Trade, and suppresses
 Plain Dealing. The Sun in * to ♂
 may probably foreshew some Prefer-
 ment to an eminent Martialist.
 'Tis Christmas time; if you have Stags,
 Distribute freely to the Poor,
 Since what you have is only lent,
 Count not such Aims as lost, or spent.
 Reg. C. 1702. Completio Legis. Rom.
 14 10.
 Venus Rex, Jovis Regem.

The Uses of the subsequent Tables.

TO find the Rising, Southing and Setting of the fix'd Stars mentioned in the lower Table of the subsequent Page by the Table of the Southing of the Pleiades : First find the Southing of the fix'd Star *'s for the Day proposed, to which Sum add the Diff. of Southings belonging to that Star whose Southing you would find, to the Southing of the Pleiades, and the Sum is the Southing of the said Star for the Day proposed ; then from the Southing of the said Star subtract the semidiurnal Arch annex'd to the said Star, and the remainder is the time of its Rising ; and to the Southing of the said Star add the said semid. Arch, and the Sum is the time of its Setting. Example, I would find the Rising, Southing, and Setting of *Arcturus* on *June* the 16th. That Day the Pleiades are South 12^h Morn. to which I add *Arcturus* Diff. of Southing, viz. 12^h 10' the Sum (12^h rejected) is 7^h 42' Afternoon for its Southing, to which subtract 7^h 54' the semid. Arch, and it leaves its Rising 48' Morn. and to its Southing add 7^h 54' and the Sum 1^h 5^h 36' the next Morning, is the time of its Setting at *London*, if you work after the latter Col. of Semidiurnal Arches, you find its Rising 1^h 36' $\frac{1}{2}$, and its Setting 3^h 47' $\frac{1}{2}$ next Morning the Lat. of 54°—More Examples are needless; for you know by a Penny how a Shilling is coin'd.

Observations relating to the Rising and Setting of the Moon.

1. That the Sun, Moon, or any Star being in γ δ Π ϵ rises sooner, and sets later with us in the Lat. of 54° than at *London*; and being in α β ζ η θ or κ they do rise later and set sooner with us than at *London*.

2. That the Rising and Setting of the Sun and Moon in the Calendar part are calculated for the Lat. of 54° North; and the Rising and Setting without respect to her Latitude.

3. That when δ has North Lat. she rises sooner and sets later and when she has South Lat. she rises later and sets sooner than you find in the Calendar part. This difference when her Lat. is test, is near half an Hour, in her Rising or Setting. Observe the following Examples.

Jan. 23. δ rises 10 h. 2' Aftern. South Lat. 1° 10' true rising 10 h. 23'
Feb. 21. δ rises 10 h. 8' P. M. South Lat. 2° 51' true rising 10 h. 24' $\frac{1}{2}$
July 7. δ sets 10 h. 40' P. M. South Lat. 2° 39' true setting 10 h. 25' $\frac{1}{2}$
July 17. δ rises 8 h. 52' P. M. North Lat. 5° 1' true rising 8 h. 25' diff. 27'
Sept. 22. δ rises at 1 h. morn. South Lat. 4° 55' true rising 1 h. 29'

King George I. died June the 11th : King George II. proclaim'd June the 15th, and crown'd October the 11th, 1727, whom God preserve.	6

Of the Eclipses of the Luminaries this Year 1733.

Umbra docet varios Lunæ Solisque Labores.

Astrological Calculations inform us, that this Year will produce four Eclipses; twice will the Moon's dark Body interpose between the Inhabitants of this Globe and the Sun, and twice will our Earth

Earth interpose between the Sun and Moon, and obstruct her from receiving that Light which she borrows from the Sun: They happen in the following Order.

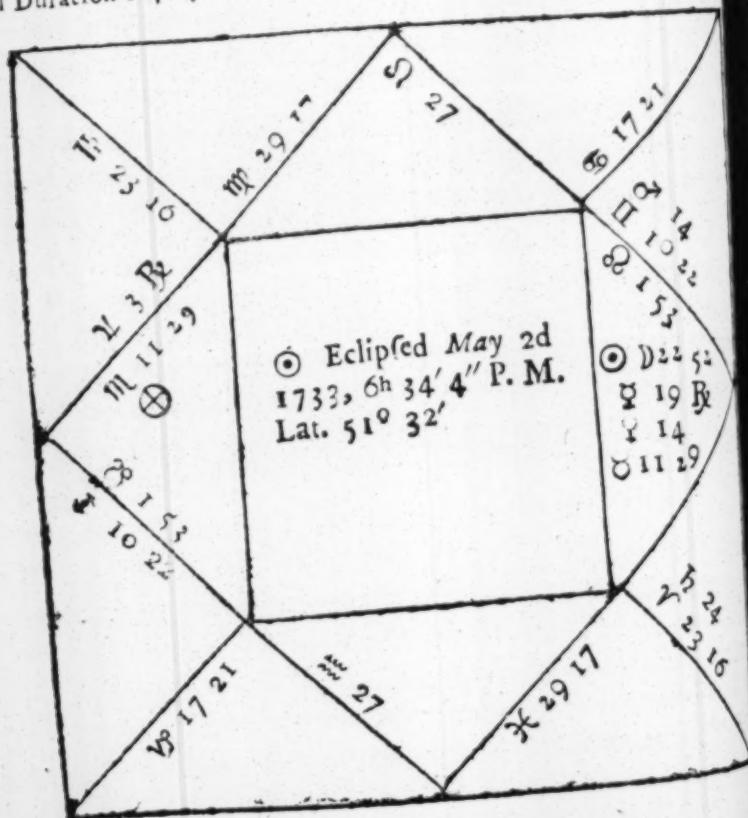

The first will be an Eclipse of the Sun, on *Wednesday* the 2^d Day of *May* in the Afternoon, and will, if Clouds hinder not, be visible to us in this Isle. An Epitome of the Calculation, deduced from the Caroline Tables, take as follows, in the Latitude of London.

Equal time of Ecliptic ♂ May
Equation of Days add
Apparent time of Ecliptic ♂

Mr. *Leadbetter* makes the middle of this Eclipse at 6 h 56' 26",
Duration 3 h 1' 54", and the Digits eclips'd 8 $\frac{1}{2}$ 25'.

ate, That with us in the Lat. of 54°, and Longitude of *Lan-*
er, the beginning, middle, and end of the Eclipse will be each
at 10' sooner than is above express'd, and the $\oslash$ will rise
past 8; consequently we can expect to see very little, or any
the same.

The third will be of the Sun *October* the 26th: the true Con-
sion happens 30' past 4 in the Afternoon; the Sun sets that
at *London* 34' $\frac{1}{2}$ past 4, and with us at 4 h 26' P. M. and be-
in the occidental Quadrant, the visible $\oslash$ always succeeds the
we need not examine any other Arguments to prove it invi-
in these Nations. It happens in the 15th Degree of *Scorpio*.

The fourth is of the Moon, *November* the 10th, 1 h 53' Afternoon:
ble to us, the Moon being under the Earth. It happens in the
Degree of *Taurus*.

The Eclipse of $\odot$, the Scheme whereof is before presented, hap-
in the 7th House, the great Angle of Business, near the
Pleiades,

Pleiades, ♄ ♀ separates from ☉, and is betwixt the Luminaries and Venus, ♂ Lord of the Ascendant is in ♀ in the 8th House those Countries and Places under ♄ principally, and those Persons who have near the 23d deg. thereof upon their Horoscopes M. C. ☉ or ♄ will be sure to feel the Effects thereof, I fear their hurt.

The Eclipse of the ♄, which will in part be visible, falls in the House near Cor M. The Moon separates from ♀ who is with ☉ the 7th; this seems to afflict the Female kind. In both Eclipses ascends and ♂ in ♀ in the 8th; God preserve the Honourable City of London from Fires, &c.

*Observations upon the four Quarters of the Year; and
first of the Winter Quarter.*

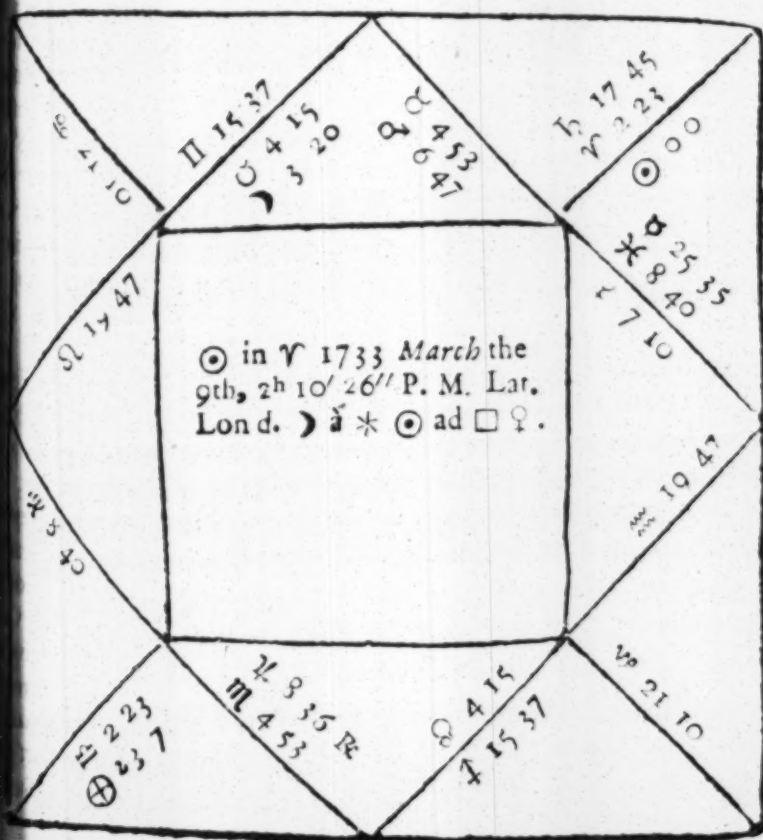

THE principal Reasons which induce some Astrologers to begin their Observations with the Winter Quarter are (as I receive) because the greatest part of the space of Time thereof happens in this Year, tho it commences in the foregoing Year; and because the Sun (according to Appearance) then entering the Tropic Sign ♋, and having obtain'd his greatest Southern Declination begins to return by slow Degrees towards us, causing an Increase of the Days, which are now the shortest, and making way for the desired Spring; and these Reasons have prevail'd with me to observe their Method. This Quarter, I say, begins *December* the 10th of A. M. 1732, equal Time by Mr. Flamsteed's Tables; but by *Street*, *December* the 10th 0^h 21' 36" P. M. By the former 25° of ♄ culminates, and 25° 52' of ♋ ascends in the East, ♄ in 9° in the 1st, ♋ in ♀ 4° in the 7th, ♂ in ♋ 1° in the 12th, in the M. C. ♄ in ♀ 18° in the 8th, ♄ in 17° ♋ in the 1st, the ♄ in 20° 5' of ♋ in the 12th, separating from a ☐ of ♄ now void of Course; the Position of ♄ in the 1st in this Year and of ♂ there at the preventional New ♄, may afflict the People with Diseases of the Nature of those Planets; the ☉ here by its Position, as always by general Signification, representing Kings, is now in * ♂ and ♋, who are in △ to each other with Reception. This seems to import great Honour and Happiness to our great King. ♄ Lady of the 5th in ☐ to ♄ in the 8th, and ♄ Disposition of ☉ in 8 thereto, intimates the Commonalty given to illiterate Men, and to be too prone to squander away their Money by Gaming and such like riotous Exercises. ♄ in the 9th and ♋ Lord thereof * of ☉ and △ of ♂, together with ♄ the Patron of Merchants, importing his * to ♄ and △ to ☉ and Cusp of the 2d, seems to import

cess to our Seafaring Men, and happy Returns to the adventurous
 Merchant, which I pray God grant.—— To conclude,
 Now Titan's feeble Rays cannot restrain
 Those Frosts and Snows, which Hyems pours amain,
 Displeas'd at this, as one in great Disgrace,
 (Till Power return) in Clouds he hides his Face.

I proceed to discourse,

Of the Spring Quarter.

WHICH commences, after the Computation of Astrono-
 mers, at that Moment of Time when the glorious Lamp of
 Heaven, the Sun, to our Appearance, touches the first Scruple of the
 vernal Sign Υ , where, having neither Declination nor Am-
 plitude, he makes the Days and Nights of equal Length to all the
 habitable World; which this Year happens, according to Mr. Flam-
 steed's Tables, March the 9th 2h 10' 25" P. M. 1733. equal time;
 by the Caroline Tables 33' 57" sooner. The Position of Heaven
 at the former time beforementioned is represented in the following
 Table.

In Conformity to the Custom of Astrologers, I have presented you with the Figure of the Vernal Ingress: but altho Astronomy in the present Age may seem almost to have attain'd its full Perfection and is undoubtedly much nearer to it than any former Age could pretend; yet no modest Artist, I think, will affirm, that he hath with absolute Certainty discover'd the Moments even of the Solar Ingresses: Upon which Consideration I shall not lay too great a stress upon the Positions of the Planets as presented above, but more principally upon the mutual Configurations of the Erratics, yet not altogether neglecting the former. The ☾, the general Significator of the Common People, you see, is in the M. C. with Aldebaran in Cauda, applying to a ☐ of ♀ Lady of the 10th, who is in her exaltation, but upon the Cusp of the 8th: this seems to intimate a Commonalty to be more ambitious than usual, and that their Judgments and Understandings are corrupted with vain Imaginations and groundless Suspensions, which render them too apt to repine at the Actions of their Superiours, as her ☐ to ♀ doth import: yet the Evil seems to be somewhat mitigated by her * to the ☉. The Position of Saturn in the 9th House in his Fall in ♄ to ☊ and Lord of the 9th in ♄ to ♀ ♄ in the fourth, seems to imply that the Endeavours of the industrious Merchant will be retarded; but the Dispositor of ☊ in * to ♂ and △ ♀ seem to abate those Fears. Also the Position of ☉ Lord of Asc. in the 9th, the ☾ in * to ♄ and to the Cusp thereof, and ♄ his △ to the Horoscope, seem to animate them to Honourable Enterprizes; I heartily wish the Success answerable to their laudable Industry. At the New preventional ♂ is in the 5th in ♄ to ♀ in the 11th, which, compar'd with some Positions in this Figure, import hard Labours, and other uncommon Casualties to attend Childbearing Women. The Position of Mars in M. C. and ♄ also can be of no good Signification. ♂ in an Angle at the Vernal Ingress, some Authors say denotes Wars, the more by being in ♄ to ♀, both applying in Aspect, with some others preceding and succeeding the Ingress, to afford an ample Theme for the experienc'd and judicious Enquirer into Stellary Influences: I hope Peace will be continued to his Majesty's Dominions. The Sextile of ♀ Lady of M. C. and Dispositor of ♂ seems to abate the Evils portended by him; at least so far as they may relate to the Affairs of his Sacred Majesty King George.

Thus much of the Spring Quarter, which

resembles Youth, whose brisk increasing Blood
 Flows in his Veins; and amorous Desire
 inflames his Breast to follow seeming Good,
 And, more than Virtue, Beauty to admire,
 Till oftentimes he find unto his Cost
 The Substance for meer Shadows he hath lost.
 I next proceed to treat

Of the Summer Quarter.

WHICH begins this Year, June the 10th 1^h 30' 49" After-
 noon, by Mr. Flamsteed's Tables, but by Mr. Street 48' 36"
 the Sun then, to our Appearance, entring the first Punctum
 the Tropical Sign ☊, having now his greatest Northern Declin-
 ation, viz. 23° 30', which causes the longest Day and shortest
 Night: The Days from this Moment beginning to decrease, and in
 six Months Space will be equal to the Nights. At this Ingress
 ☊ culminates, and ☌ 15° 59' ascends, ☌ in the Ascend. in
 25° 40', ♀ there in ☌ 29° 44' 55" ♀ ♀ in the 7th in 28°
 42" ♀, ♀ on the Cusp of the 9th in ♌ 12°, ♀ near ☉ in
 ♌, and ♂ in 10° ☌, all in the 9th, ♌ in ♌ 29° 50' in the 2d.
 ☌ in the Ascendant is reputed fortunate, the more so by being
 the Body of ♀; but her first Application being to the ☌ of ♌,
 I fear, be a strong Exception against that General Rule. At
 the preceding Lunation ♌ was in the 1st, and the ☌ now in ♌
 him may probably give a Summer Distemper. ♀ Lady of the
 Ascendant is combust of ☉, but ☉ and ♀ are in ♌ ♀ and * ♌,
 the ☌ having past the ☌ of ♌ goes from the Body of ♀ to
 ♌ ☉ and ♀ — *Post tenebras spero Lucem.* ♀ Lord of the
 1st in ♌ in the 9th in ♌ to the Lunar Horoscope, together with
 ♀ and ♀ their ♌ to ♀, promises in a natural way Happiness and
 success to the Trading Part of Mankind; tho' 'tis to be feared some
 Scurvy by Sea may attend the Merchant when ♂ shall transfit the
 ☌ of ♌ at the Vernal Ingress. I conclude this Quarter, wherein,

Don Phœbus doth ascend his Throne of State
 Whence he dispenses hot and sultry Rays
 And Sirius join'd with him, increases Heat
 Chiefly in those we nominate Dog-Days.
 Slowly he moves; unwilling to retreat
 And parches all the Lawns with scorching Heat.
 I proceed to

The Autumnal Quarter.

WHICH takes its Beginning this Year September the 14^h 29' 3" P. M. or Vulgarly September the 12th 29' past 2 a Clock in the Morning; but by Mr. Street's Tables 1h 6" later; the Sun then appearing in the first Scruple of the Equinoctial Sign Libra, makes the Day equal in Length to the Night as his Entrance into Aries makes the Night Equal to the Day.

*Sunt duo Solstitia: hæc faciunt Cancer, Capricornus.
Sed Noctes æquant Aries et Libra Diebus.*

At this Instant γ 10° culminates, and Ω 23° 16' ascends, δ is in 10° and subtile ψ in 15° $\mp$ in the 2d House, the $\odot$ is there, η in $\cap$ 27° in the 3d, ν in $\mathfrak{M}$ 10° upon the Cusp of $\mathfrak{L}$ $\oplus$ in $\approx$ 14° in the 6th, $\sphericalangle$ in $\mathfrak{H}$ 21° 23' in the 8th, and $\mathfrak{h}$ in 29° $\mathfrak{B}$ in the 9th House. The M. C. is vitiated by the presence Cauda and δ of ν and η Lady thereof, tho in $\cap$, yet cadent, and in δ of $\mathfrak{h}$ Lord of the 7th House. These Positions seem inauspicious to the Affairs, and denote much Fatigue, Discord, and Contention in the Counsels of Princes; in the preceding New Moon know η is in the Ascendant, but it is celebrated in the 12th House in the Place of ψ in this Ingress, who therein is in δ $\sphericalangle$. This fear amends not the Matter; the $\sphericalangle$ separates from an δ ψ , now void of Course, but applies next to δ $\odot$; I heartily wish the Commonalty would more seriously consider their Duty of being subject to the Higher Powers, and not rashly censure and reprehend those Actions which are not within the Sphere of their Capacities; ψ is strong in $\mathfrak{M}$, in $\ast$ to ν , yet near the body of δ and $\mathfrak{h}$ $\mathfrak{B}$ in 9th in δ η is prejudicial to the Affairs of the Honorable Merchant, which the position of ψ seem'd to advance. *manum de Tabula*; for now

From the Æquator tow'rd's the Southern Pole
With wonted Speed Titan doth post away;
Thro' Libra and the Scorpion he doth roul
Nor doth his Chariot in the Archer stay.
Thus mutatinious Fate affects the Great
When once the Zenith's touch'd, all must retreat.

With'n this Year 1733 will happen a remarkable Conjunction of *Saturn* and *Mars* on the 6th day of February in the Morning

Planets at the exact time of the Conjunction are under the Earth, on the 5th of *February* in the Evening, if Clouds interpose not, may be seen towards the West; the Time, Longitude, and Latitude of the Planets, from the *Caroline Tables*, take as follows.

Real Time of	{	Longit. γ	{	Lat. $\hbar$ 2°	{	Setting $\hbar$ $9^{\text{h}} 12' \frac{1}{2}$	{	Lond.	
Conj. Febr.				$19^{\circ} 45''$ S.					of σ 0°
$5^{\text{h}} 36' 36''$				$14^{\circ} 9' 47''$					of σ $9^{\circ} 17'$
M.				$08' 11''$ S.					

Their Elongation from $\odot$ $45^{\circ} 33' 48''$. The 5th day in the Evening, the Lat. of $\hbar$ sets at $9^{\text{h}} 14'$, and σ at $9^{\text{h}} 21' \frac{1}{2}$. This Conjunction happening in an Equinoctial, and the chiefest Sign of the Zodiac, will invite the Celestial Philosopher to consider the Nature of its Effects, which are likely to be very remarkable, as well as Laborious Astronomer to observe the Motions of these Planets at the time of the Phænomenon; if the Air permit. Moreover on the 24th Day of *September* in the Evening will happen a Conjunction of those glorious and benevolent Planets *Jupiter* and *Venus*; by the aforesaid Tables, the exact time of the σ . cannot be told; but their Elongation from $\odot$ being $29^{\circ} 36' 27''$, if the Air be very clear they may be seen a little before their Setting S W; the Particulars of this σ by Calculation, will appear as follows.

Real Time	{	Longit.	{	Lat. of γ	{	London $\hbar$ ' }	{	Lat. 54° N.
Sept. 24th				$53' 2''$ N.		γ sets at $6^{\text{h}} 38'$		$6^{\text{h}} 30' \frac{1}{2}$ P.
$14^{\circ} 21''$				$m 12^{\circ}$		of γ $18'$		$6^{\text{h}} 20' \frac{1}{2}$ M.
M.		$3' 25''$		$37''$ S.		γ sets at $6^{\text{h}} 29'$		

The $\odot$ sets that Night in the Lat. of *London* $5^{\text{h}} 35'$ P. M. In the σ $\hbar$ σ , σ is very strong in his own House, and elevated above $\hbar$ $2^{\circ} 11' 34''$; in the σ γ γ , γ is very weak in her Element, and γ is elevated above her $1^{\circ} 11' 39''$.

A plain and easy Table of Simple Interest at 5 p. Cent.

Happy's the Man who can this Table view,
 And truly say, no Int'rest from me's due :
 But he that pays it, tho' at five per Cent.
 Had better off, for Land, pay yearly Rent :
 Yet for good Reasons, as the Case doth stand,
 It must be tolerated in our Land.

I purpose in my next to insert the Declination, Right Ascension, and Semi-diurnal Arches of these Stars, in order to find their Rising, Southing, and Setting.

He telleth the Number of the Stars : he calleth them all by their Names, Psal. 147. 4.

A necessary and useful Table of the Increase and Decrease of the Days for every 3^d Day in the Year calculated for the Latitude of 54° North.

Days.	Jan.		Febru.		March		April		May		June		their half their
	Day inc.	H. M.	Day inc.	H. M.	Day inc.	H. M.	Day inc.	H. M.	Day inc.	H. M.	Day inc.	H. M.	
10		30 2		20 4		20 6		32 8		31 9		44	Decreasing, if you subtract half their
40		38 2		32 4		32 6		46 8		40 9		46	
70		46 2		44 4		44 6		58 8		50 9		48	
100		55 2		56 4		58 7		10 8		58 9		48	
130		5 3		10 5		12 7		21 9		6 0		0	Decreasing, if you subtract half their
160		16 3		22 5		24 7		33 9		14 0		2	
190		28 3		36 5		38 7		46 9		22 0		4	
220		40 3		48 5		50 7		58 9		28 0		6	
250		50 4		2 6		3 8		8 9		34 0		12	
280		2 4		16 6		15 8		19 9		38 0		18	
10		24 2		0 4		8 6		16 8		24 9		44	Increasing, if you add half their
40		32 2		12 4		22 6		30 8		34 9		46	
70		39 2		23 4		32 6		42 8		44 9		48	
100		45 2		36 4		44 6		56 8		54 9		48	
130		54 2		48 4		59 7		8 9		3 0		0	Increasing, if you add half their
160		4 3		0 5		12 7		20 9		12 0		2	
190		14 3		14 5		24 7		32 9		20 0		4	
220		24 3		26 5		38 7		46 9		26 0		8	
250		36 3		39 5		50 7		58 9		33 0		14	
280		47 3		51 6		4 8		8 9		39 0		20	

Note, When the Days are increasing, if you add half their increase to 3^h 33', the Sum will be the Time of the Sun's setting at Night. Thus March 16, they are increased 5^h 24', half thereof 2^h 42' added to 3^h 33' gives 6^h 15' for Sun-setting.

Plain and easy Table shewing the Times of High Water at these Ports.

Subst. M.	The Names of the Ports.	H. Add M.
North	Quinborough, Portsmouth, Southampton, Isle of Wight, Spitts, Dunkirk, Canada, and Kentish Knock.	South 0
E by E 38	Rockester, Maiden, Aberdeen, and at Redband.	0 S by W 46
E by N 51	Gravesend, Downs, Rumney, Scilly, Thanet, N. Cape, Before Coquet, and between Calais and Dover.	1 S S W 33
E by N 5	London, St. Andrews, St. Lucas, Dundee, Holy Isle, Bell Isle, and Lisbon.	2 S W by S 19
E by E 19	Hartlepool, Timmouth, White-bay, Amsterdam, Gascoign, and upon the West of Ireland.	3 So. West 6
E by E 32	Berwick, Bridlington-Bay, Flamborough, Bourdeaux, Rochel, and at Ushant.	3 SW by W 52
E by N 45	Scarborough, Severn, Mounts-Bay, and at Kinsale, and Humber.	4 W SW 39
E by N 59	Newcastle, Severn-mouth, Falmouth, Ramsey, Dartmouth, Lizard, and Guernsey.	5 W by S 25
E by E 12	Plymouth, Antwerp, Lynn, Hull, St. Davids, Holm, St. Peters, Fosdike, and Cross-Keys Washes.	6 West 12
E by S 26	Weymouth, Bristol, Lime, Foulness, at the Start, Boston, Lanton, Sedmouth, and at St. Nicholas.	6 W by N 58
E by E 40	Milford, Bridgewater, Lands-End, Portland, Waterford, and Limington.	7 W N W 45

E by S 20	Needles, Laystow, the North and South Forelands.	10 NW by N 4
E by E 33	Yarmouth, Dover, Calais-Road, Harwich, Cowes, Goasts of Normandy and Picardy.	10 N N W 51
E by E 47	Rye, Thames, Rhodes, Winchelsea, Sole-Bay, Goore, and Margate Road.	11 N by W 37

The Explanation of the Table.

I would know the Times of High-Water at Newcastle, Severn-mouth, &c. on the 10th day of June this Year; that Day I find D South 32' past Midnight; I find by this Table, that when D is E. by N. or W. by S. 'tis High Water at those Places, and by subtracting 6h 59' from her Southing, and adding 25' to her Southing (those being the Numbers adjoin'd to those Ports in the Table) I have 5 h 33' the Evening before, for the former, and 5 h 57' for the latter time of High Water that Morning. This is Mr. Weaver's Method of computing the Tides, and more correct than the common way of finding them. These Tables adapted only to the Moon's Age; and thus,

Cynthia, the Queen of Night, with changeful Laws,
Commands the Ocean, and its Motions Cause.

Let me acquaint the studious Artift that the Latitude of the
in the preceding Calendar is only an Approximation; tho
puted from the best common Table extant, and near enough
Truth for ordinary Ufe.

*O fortunatos nimium, sua si bona nôrint,
Agricolas ! — — —*

SING, lofty Muse, but in a rural Strain.
The happy State of that industrious Swain,
Who free from noisy Courts, and from the Bar,
Where Law Expounders, in a feigned War,
Oppose each other with dissembled Rage,
But Dame *Pecunia* tempts them to engage :
'Tis not *Astræa* ; she is fled away
To Heav'n, or with the Country Swain to stay.

A Country House, a Garden neatly dress'd,
A fruitful Farm, with Corn and Cattle grac'd,
Convenient Feeding for a Flock of Sheep,
A careful Shepherd them to tend and keep,
A cheerful Wife, who with industrious Care,
Doth for the Household wholesome Food prepare.
These choice Delights, which Courts and Cities want,
Indulgent Heaven to Country Climes doth grant.

In sweet Retirement, here, my Days I spend,
And dear Content my Station doth attend.
When gentle Streams in *Hodder's* Channel glide,
I walk with Pleasure by that Current's side ;
There have I Leisure oft to contemplate,
The various Scenes of mutaitious Fate ;
And when refreshed with salubrious Air,
And cheer'd with Relaxation from my Care,
My Studies then, with Pleasure I pursue,
And when I sleep bid all my Cares adieu.

*Burholm in Bowland,
Yorkshire, April 10. 1732.*

P E R O R A T I O.

MY gentle Muse, this once I thee invoke,
 To give my first Essay the final Stroke :
 I am not thy Master, that he did engage
 To write at all in this politer Age ;
 Nor tell the World, thy Master wanted Art,
 To give *Urania's* Secrets to impart :
 Each foolish Cant is no Apology,
 That I can't do, surely I should let be :)
 I do not boast at all, thy Master's Skill in Art,
 Who doth but act a willing *Tyro's* part,
 With loud Mouth his Knowledge thou proclaim,
 His present Work will thy Encomiums shame,
 And stain with Arrogance its Author's Name.
 I tell my courteous, loving Country Friend,
 Who was my Mark, in all that I have penn'd ;
 And since good Archers sometimes miss the Mark,
 Venial Faults the Critic should not bark :
 I further tell my Friends, this little Book,
 Leisure Hours produc'd : and if he look
 On the same with Candour ; it will be
 Token of his kind Respects to me.
 Having done, my Muse, attempt to fly
 To the Regions of the spangled Sky,
 Invoke the Nine, thy Raptures to attend,
 Whose chiefly on *Urania's* Aid depend,
 Whose swift Wings with ease thou may'st ascend,
 And to those fluid shining Orbs aspire,
 Where *Titan's* golden Globe thou may'st admire,
 Be not too near the furious God of War,
 To mark his Motions from some milder Star :
 Let gentle *Jove* direct thy prosp'rous way,
 Maintain thyself with his auspicious Ray ;
 And from his Orb inspect, (tho distant far
 Therefrom) the Sphere of the encircled Star ;
 Hence also view those boundless Orbs of Light,
 Where, with his Sons, *Arcturus* shines so bright.
 These observ'd, 'tis time thou should descend
 To that resplendent Star, the Lover's Friend :
 That remark how *Mercury* doth bear
 Things to *Sol* of all that he can hear ;

Then

Then Silver *Cynthia's* changing Orb survey,
 I charge thee mark her most perplexed way ;
 Be sure describe her mutaitious Laws
 At thy Return ; so shalt thou gain Applause.
 Then to thy Master, see thou come again,
 With dextrous Care, those Motions to explain,
 So for the future, he will better be
 Prepar'd to serve his Friend, and honour thee.
 Make haste, my Muse, haste to return, for fear
 I want thy Aid in the ensuing Year.

Mantissa.

Readers, my Work is done, my Muse is fled,
 But she'll return ; I'm sure she is not dead :
 At her Return I hope to sing again
 And with her Aid to elevate my Strain.
 Mean while adieu ; may Peace and Plenty bless
 And crown your Hopes and Labours with Success ;
 May great *Jehovah* still preserve our King,
 I mean King *GEORGE* ; his Praise I mean to sing.

Si non culpabor, sat mihi Laudis erit.
